We are proud to announce the opening of South Coast Dental Specialists Dorchester

Graham Browning is proud to announce that South Coast Dental Specialists Dorchester opened its doors to patients, at the beginning of May and is now accepting referrals for all aspects of treatments - Specialist treatments, Endodontics, Periodontics and Prosthodontics. Since opening we are proud to introduce a new member to the team—Hafeez Ahmed. He will be accepting referrals for Periodontics.

Beverley Clent our dental Hygienist has valuable experience when it comes to caring with patients with Dental implants who have dental implants and complex restorations. Beverley can accept referrals for your all your patients Hygiene needs. Beverley will be offering development evenings for Hygienists on the subject of caring for patients with Dental implants.

CPD: 2 hours verifiable CPD
Cost: £12.00
Venue: South Coast Dental Specialists Dorchester
Booking: RSVP to pete@rootcanals.co.uk
Our News

- Sadly at the start of this year we lost our hygienist Sharon after she lost her brave battle with cancer.

- We are hoping to launch a practice managers networking support group. The aim of this would be to share our ideas and experiences—If you would like to get involved in this—please contact Sarah on 01202 889960.

- We are pleased to show our continuing support to the Chernobyl Children's lifeline by providing dental treatment for them during their stay. We are looking forward to seeing them in July this year.

- We would like to help our referring dentists to restore some of the implants we place. We are running a series of courses on this. If you are interested please call Sarah on 01202 889960.

FROM DENTURES OR A FAILING DENTITION TO FIXED TEETH IN A DAY

At South Coast Dental Specialists we now routinely carry our immediate loading of our dental implants if it is suitable for the patient. With careful planning an execution we can remove any failing teeth and place usually four implants and our technician is on site to construct the provisional bridgework to be fixed to the implants within 1-2 hours. This treatment can be carried out either as a single arch or a double arch treatment protocol as can highlighted in the images to your right. Three to four months later the patient is provided with definitive bridges constructed of a titanium framework with composite teeth.

We can now carry the treatment out with four implants in each arch, utilizing angled posterior implants and angled posterior abutments, to avoid the need for sinus grafting and more implants per arch. This results in a more affordable treatment option from which many of our patients are now benefitting.

If you would like to find out more refer one of your patients or if you would like to come and view a case please do not hesitate to contact us.
